Volvo Penta's EVC Upgrades Transform Your Boating Experience

Available features

Single-Drive kits starting at \$5,200

Twin-Drive kits starting at \$7,300

Triple-Drive kits starting at \$11,300

Quad-Drive kits starting at \$13,700

Upgrade your experience today!

** Two Year Factory Warranty when installed
by a certified Volvo Penta Dealer*

Before

NOTE: Smart features are not available on all installation types, please contact us for more details.

After

Currently available ONLY for EVC systems from: 2003 or newer diesel applications & 2009 or newer gas applications.

Smart Features

Trip Computer

Get trip computer functionality with information about fuel consumption, distance to empty, trip time, and much more for optimizing your boat's performance.

Cruise Control

With fingertip control of your engine rpm, you can fine-tune your boat's speed for best possible fuel economy and comfort.

Powertrim Assistant

Gives you the best possible drive trim—fully automatically—for perfect running attitude. Results in optimum performance and low fuel consumption.

Single-lever Mode

Operate twin, triple, or quad engines with only one lever. Gives you easy control over speed, even in rough seas.

Low-speed Mode

Reduces boat speed at idling by 50% from 5–6 knots to 2–3 knots. Integrated in the control. Perfect when you are driving in marinas and canals.

Autopilot

EVC-integrated, locks automatically to steering wheel course changes (shadow drive).

Tow Mode

Limits your boat's speed to our preset maximum rpm. Maintains the set speed and compensates for any changes in load, for maximum water sport fun.

Sportfish Mode

Makes it possible for you to rapidly turn your boat around its own axis—and follow the fish at high speed in reverse, using only the engine controls.

Joystick Docking

Makes docking easy, even fun. Forget complicated maneuvers in close quarters. Just move the joystick in any direction and your boat will follow. You can install up to six Joystick Docking stations on your boat.

Dynamic Positioning

Automatically maintain your position. With the repositioning feature, you can rotate the boat, move forward, backward and sideways, while remaining in DPS-mode, with just a simple tap or rotation of the joystick.

Assisted Docking

This is a hybrid between Joystick Docking and the Dynamic Positioning System. It is intended to be used in slow speeds close to the dock. The included feature side push will assist when docking sideways against a fixed structure.

Joystick Steering

A whole new way to maneuver with precision at all speeds. You steer comfortably with the joystick. The integrated autopilot supports by automatically engaging after every course change.

Interceptor System

The robust and compact design of the Interceptor System (IS) ensures efficient and reliable boat trim for Volvo Penta powered yachts from 35 up to 100 feet. Fully integrated with EVC, it has become the perfect solution to provide ease. The fully automatic boat trim option will make your driving easier than ever. The interceptors are available in sizes from 300 to 1,050 mm.

Glass Cockpit System

Gathers all driver information in one place—for enhanced overview and instant control of both navigation and engine.

NOTE: Smart features are not available on all installation types, please contact us for more details.

Currently available ONLY for EVC systems from:

- 2003 or newer diesel applications
- 2009 or newer gas applications
